

PLUS GLODACID

GLODACID PLUS SOFT BAIT

The strongest and most effective rodent control product, a »single-feed« rodenticide.

The Glodacid plus Soft Bait is a rodenticide, used for the eradication of house mice and black and brown rats. The active ingredient is effective even in small doses - a single bite is enough, because the product is a »single-feed« rodenticide that causes rodent demise after the first bait ingestion.

Brodifacoum is fast and effective even in single bite is enough, because product is a »single-feed« rodenticide that causes rodent demise after the first bait ingestion.

The delayed effect prevents other rodents from rejecting the bait.

To increase safety of children and domestic animals soft baits contain the bitter human aversive agent.

The bait is packed in special filter foil that prevent any contact between user and the active substance. They also prevent any moisture development and prolong the efficacy of the bait.

Place the baits in areas where mice and rats appear. If people and other animals also enter these areas, hide the bait with planks or bricks.

Advantages:

- Proven to be the most effective and palatable form of rodenticides.
- High efficacy due to the delayed action.
- Highly effective even in small doses.
- Additional attractants lure rodents to the bait.
- Contains aversive agent making the bait safe for humans and pets.

Directions for use:

For best result place the baits near the nest or near the areas where the rodents are. Set the wax blocks where there is a rodent infestation. The baits should be well positioned / hidden where the humans and other animals are present.

- For house mice (*Mus musculus*) place 10-20 g bait every 2 to 5 meters

PLUS GLODACID

place 10-60 g bait every 5 to 10 meters

- For rats (*Rattus norvegicus*)

Packaging & transport packaging:

- 150 g in carton box → 20 pcs / transport box; 1.320 pcs / pallet
(6 layers / 11 transport boxes per layer)
