

BIO PLANTELLA VITAL FOR TOMATOES

Natural plant spray on the basis of field / common horsetail that strengthens fruit vegetables, like tomatoes, cucumbers, zucchini, pumpkins, eggplants, ... and keeps them vital and healthy.

UNIQUE ADVANTAGES:

- Strengthens plant cell walls and thereby helps prevent the entry of the disease into the plant resulting in raised plant resistance.

ADVANTAGES:

- Field / common Horsetail is extremely rich in natural silica, calcium and other minerals and vitamins.
- No waiting period - the product is completely harmless to humans and animals and we can eat vegetables and fruits immediately after use.
- Ready to use, handy packaging.
- Suitable for organic farming (on the list for ecological farming).

USAGE:

BIO
Plantella

COMPOSITION:

Field horsetail (*Equisetum arvense*) extract: 0.14%.

DESCRIPTION:

Natural plant spray Bio Plantella Vital contains extract of carefully chosen field / common horsetail (*Equisetum arvense*), naturally rich with silica, calcium and cobalt, and the optimal share of minerals and vitamin E.

Field or common horsetail plant is ideal for organic gardening, since it contains natural potassium silicate solutions that are absorbed in plant, where they fortify plant cells and thus protect plants against diseases. Scientific experiments have shown that potassium silicate solutions can protect tomatoes against tomato blight, cucumbers against damping-off, cucumbers and pumpkins against powdery mildew, tomatoes and other fruit vegetables against fungus diseases like scale, wilting, disease-weakened plants. By choosing the appropriate plants and the correct formulation the impact is highly increased.

Due to tested formulation and extraction of specially selected field/common horsetail plants with high silicon, calcium and cobalt share, as well as other minerals, Bio Plantella Vital is ideal for natural prevention of diseases spreading on all fruit vegetables, like tomatoes, zucchini, pumpkins, cucumbers, eggplants, peppers.

DIRECTIONS FOR USE:

Start spraying tomatoes and other fruit vegetables with Bio Plantella Vital when they fully develop 4 leaves and continue to spray every 7-10 days through their total growth cycle. Repeat the application after every rain.

Shake before use. Spray the plants in evening hours when sunlight is low. For best effect it is very important to start spraying the plants before the conditions (i.e. temperature, humidity) that cause diseases arise, usually in Spring and Summer.

IDENT / Packing:

- 52295 / 500 ml, 12 per pack, 50 packs on pallet

TESTED EFFICACY:

Our products are the result of years of knowledge, proven research and technological innovation. Their efficacy has been tested and validated in scientific laboratories.
