

RATIMOR® PLUS

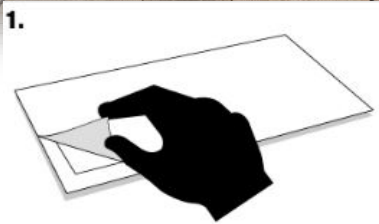

The product is meant for the control of commensal rodents in houses, stores, barns and other buildings where the use of poisonous rodenticide baits is restricted (because of the presence of pets, children). Beside the use for rodent control, it can be used also as monitoring device.

Advantages:

- contains no active ingredient
- once applied it is effective for 3 months (depends on dust on site where it is applied)
- product for rodent control and monitoring device
- can be used in places where rodent carcasses are difficult to find

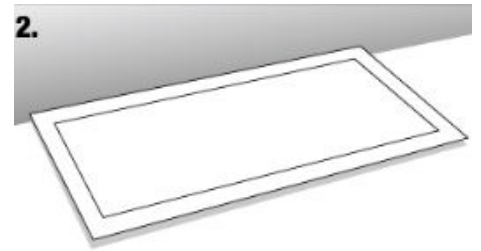

remains of the product are not harmful

Directions for use:

Pull the protective foil from the glue board.

Place the glue board next to wall corners or on sites where the rodents are frequent. For higher efficacy, the boards should be 3m apart. Check the glue board several times per week. When the rodents are bonded on the board, dispose the glue board. To improve the attractiveness put some seeds on the glue board.

Product dimensions:

- glue board (280 x 140mm)
- PE bag (2 glue board inside) (282 x 137mm)
- designed cardboard box (305 x 168 x 81 mm)

Packaging:

- 2 glue boards per PE bag
- 20 PE bags per cardboard box
- 3.360 pieces per pallet (12 layers / 14 cardboard box per layer)
