

SM 'art[®]
Surface Materials

Catalogue

Designed and made in Italy

Company

We are a dynamic and constantly evolving company that has made innovation its mission, adopting a new creative and productive approach.

We design and produce decorative panels and laminates.

We aim to create astounding design materials with a strong **Made in Italy** connotation, not only as a concept, but indeed as the majority of the raw materials we use come from Italy.

By investing in **equipment and valuable raw materials**, we are able to conceive and craft unique decors and finishes in order to create products that convey emotions, materials with a soul.

Through collaboration with **architects and designers**, the artists of today, we want to create a hotbed of ideas that allows us to pursue the dream of a high-end bottega.

Why orange?

Orange was SM'art's distinctive trait from the start, its signature, its colour.

We chose it because it reflects our feelings: **it is the emblem of creativity and optimism**. It is the sum of two primary colours and brings with it the explosive power of red, mitigated by the energetic cheerfulness of yellow: it's a colour for all seasons and it comes in countless shades.

Orange has always been associated with well-being, with conviviality and, in general, with a feeling of contentment, and at SM'art we want to make sure that the intention with which we create and manufacture all our products translates into the pleasure of using them, in order to stimulate and satisfy both the sight and the touch. That's why we sign everything with the color, that better than any other, reflects this philosophy: the fiery orange of the dawn of a new day, bearer of stimuli and novelties.

Green mission

At SM'art we have undertaken a path to improve the impact of our production: respect for the environment, attention to sustainability and use of clean and renewable energies, our green mission follows all these paths.

We're proud to do our part and we're committed in the energy transition, to contribute to the increase in the percentage of final consumption of energy coming from renewable sources, in particular through photovoltaics.

That's why we have equipped ourselves with a "green roof", built in 2018 for our factory: a **photovoltaic panel system for a production of approximately 400 kWh**.

In the name of renewable energy and sensitivity to the environment, we have invested in eco-sustainable means for the internal handling of materials. Thanks to our **electric forklifts** that work with lithium-ion batteries, we reduce energy consumption.

The factory lightening has been converted, investing in a **total LED installation** which allows a drastic reduction of the energy consumption.

Thanks to our well, **the water used in the company comes directly from subsoil**, enabling us not to waste precious resources of potable water.

We also pay a great attention to the use of raw materials in the products we use and transform; all products from forest origin belong to a **certified Chain of Custody** that guarantees responsible collection in the name of safeguarding biodiversity, carbon isolation and improving water supply. Furthermore, the raw materials we use contain, on average, a minimum of **39% of recycled materials**.

Finally, our sense of responsibility for a lower environmental impact is witnessed by the **separate collection** in which we are committed over the 50%.

At SM'art we therefore invest in environmental sustainability and are committed to building a greener and human-sized world: our products are destined to enter the homes and daily lives of the final user and it is important for us that they convey our message and **our commitment to a better future**.

Product range

We design and produce TFT Thermo Fused Texture boards, HPL High Pressure Laminates and Compact HPL.

TFT Thermo Fused Texture

We produce TFT Thermo Fused Texture boards with high technical and aesthetic features in many thicknesses and various substrates. We create realizations with synchronized finishes, deeply embossed structures and unique decors.

HPL High Pressure Laminates

All the items of the TFT Thermo Fused Texture panels range have a perfect coordinated 3050×2050 mm HPL laminates, with identical decors and finishes, even with Synchropore. We produce also a range of 4200×1400 mm HPL laminates for tops, often coordinated with the TFT Thermo Fused Texture panels.

Compact HPL

We produce a range of Compact HPL often coordinated with TFT Thermo Fused Texture panels and HPL laminates. Compact HPL can have the core of various colors.

Matrix

We produce a range of panels with high visual effects, particularly indicated for the interior decoration. Matrix is made of a methacrylate core surfaced with HPL and then machined to be backlit.

ABS Edges

A product which completes and aesthetically trims the finished piece. We develop our edges to perfectly match our decors and finishes, guaranteeing a sense of continuity. We stock numerous edges coordinate to the surfaces of TFT Thermo Fused Texture and laminates.

TFT solutions

TFT Thermo Fused Texture boards can be produced with various cores or solutions.

Particleboard and MDF

We offer particleboard and MDF substrates in Standard, Hydro with high moisture resistance, Euroclass B with fire retardant properties, EPA with reduced formaldehyde content in conformity with USA standard.

Compact Board

Compact Board is an MDF panel with black core, that can be installed without the use of an edge leaving the black thickness at sight, or can be machined revealing the black core.

DWELS

Poplar OSB that can be surfaced with most of the decors and textures of the range. DWELS has high performance: lower water absorption, no added formaldehyde, light, very resistant to flexion and screw tear.

TFT Magneto

Magneto is a SM'art TFT Thermo Fused Texture panel containing a thin steel sheet that allows the sticking of magnetic accessories. The attraction strength depends on the magnetic camp generated by the magnet. Magneto panels have the usual dimension 3050×2070mm, but the steel sheet covers the size 3040×2050mm.

TFT Silent

Silent is made with a 19 mm Compact Board core (black MDF) machined with longitudinal routing on one side and transversal on the other side. The routings are 11 mm deep, 5 mm wide and with interaxe 30 mm. Where the routings meet create square through holes that absorb the noise.

MDF one side

We manufacture thin MDF boards surfaced on one side, particularly indicated for interior doors.

HPB High Pressure Board

HPB is a solution that we can produce with all the decors, textures and substrates of our range. It consists of a laminate pressed directly on the required board. The customer won't need the gluing. The surface is much more resistant to hit and abrasion and can be used also horizontally.

Chrome HPB

Chrome HPB has the same characteristics as HPB but with a white core laminate instead of brown core.

Strenghts

We are special for many reasons, here the most important ones.

Synchronized surfaces

The Synchronized surfaces have the **exact same layout in finish and decoration**, making the surface much more realistic and natural. We produce register surfaces on TFT panels, HPL laminates and compact HPL, making coordinates even more exclusive.

Availability and flexibility

We stock a great number of items in order to offer a **rapid and widespread** service even for small quantities. **Minimum orders** are accepted, even from production of a few units.

Easy to clean

Thanks to a very high resin content, our surfaces are **low-porous** and therefore very easy to clean.

Textured finishes

Our aim is to create **emotional finishes** which give tactile and visual experiences.

Impact resistance

We specialize in very deep finishes which are produced in most cases with a **heavy barrier between the base board and the decor**. The barrier greatly increases the impact resistance of the surface.

Resistance to bacteria

The surface of our panels, laminates and compacts has strong **antibacterial features**.

Coordinated range

We offer a **range of coordinated products**: the TFT panel for the vertical surfaces, the HPL laminate for curved and horizontal surfaces, the self-supporting compact HPL for tops and tables, the ABS edge to finish the elements.

Water resistance

The surfaces of our panels are **completely waterproof**.

Attention to the environment

All the raw materials from forest origin that we use belong to a **certified chain of custody** that guarantees responsible collection in the name of safeguarding biodiversity.

Dune

Designed by
Andrea Federici

Dune

Dune, the **SM'art collection** designed by **Andrea Federici**, is a range that evokes strong emotions, which makes memories resound and ignites the desire to explore.

The theme of the journey is taken as a pretext as a starting point for the story of an itinerary, a path that represents the fil rouge of the collection, which includes **twelve colors, including four solid colors, four woods and four cements**.

Dune is a **linear and irregular finish at the same time**, stimulating and pleasant: the ideal complement for all spaces, it will allow you to travel on the thread of memory and imagination.

Reverso

Designed by
Rossi&Co.

Reverso

Reverso, the collection resulting from the **collaboration with Rossi&Co**, is a finish with a clear identity, designed to be reversible thanks to a zero waste solution.

A dense network of thin lines, inspired by the universe, that give shape to a rigorously pitched knit, capable at the same time of transmitting **lightness and movement**.

Reverso is available in a wide palette of colors and is divided into two thematic lines: the **Linea Tempo**, in the colors of the wood, and the **Linea Luce**, with its range of metallic colors.

Aniline

Aniline

Aniline is a range in **bright, fresh, fun colours** accompanied by a register embossed pore finish.

The colour of the aniline shades reflects the **Mediterranean landscape** and inspiring dreams of cruising around the Greek islands.

We present Aniline in a wide range of coordinated products, allowing the design of the most varied interiors with just one surface.

Atom

Electron Beam Surface

Atom

Atom is pure energy. The product combines the technical features of strength and regeneration with the aesthetic ones of **extreme matt** and materiality.

Thanks to specific raw materials, treated with the **Electron Beam** technology, the finished product has some unique characteristics:

- | | |
|--|--|
| 1. Anti-scratch
Atom has an extraordinary resistance to scratches. | 4. Matt
Atom has an extremely low reflectance, the surface is completely matt. |
| 2. Low Abrasion
High surface resistance to abrasion. | 5. Anti-finger print
Even if completely matt Atom does not fear the fingerprint marks. |
| 3. Regeneration
The outward micro-scratches can be repaired. | 6. Easy clean
Atom is very easy to be clean. |

All these exclusive properties make Atom an incomparable product. It can be used both vertically and horizontally.

Canyon

Canyon

One of a kind marble, Canyon shows different features perfectly blended among them.

The various elements are shaping **big and smooth longitudinal “movements”**, crossed by diagonal veins. The finish, synchronized, has a **sandblasting effect** enriched by two matt levels. The peculiarity of the texture is also given by the **different deepness**.

The surface is divided in deeply structured and super matt areas spaced out by flat and matt areas. All these characteristics give a **warm and natural touch**.

Polvere

Polvere

The collection has been created with the intention of replicating a metal surface treated with **powder coating**.

The finish has a microstructure with a **grainy feel**, typical of the lacquer it reproduces, which gives an high scratch resistance.

Moreover it has a rare brilliance and a micaceous effect, due to the use of pearlescent ink in the printing of the decoratives.

Polvere is produced in a **wide palette of colours**, the result is surprising in both the light and very dark shades, all of them characterized by a strong print homogeneity, which makes them easily combinable with other materials. The collection is a **technical and elegant product**, which enriches a piece of furniture or an entire decoration without impacting on them.
