TETŐTECSERÉP /  
BASIC ROOF TILE

**M-333 VELIKA KIKINDA**

Méret / Dimensions	400 x 245 mm
Fedési méret / Covering dimensions	335 x 205 mm
Tömeg / Mass	2,5 kg
Léctávolság / The lath spacing	cca 335 mm
Egy m <sup>2</sup> felület befeléshéz 14,5 db cserép szükség s / 14,5 tile pieces are needed per 1 sq m	
Használat / The use of	Tetőfedő / roofing
A termék szállítása / Transport	Raklapokon / transport is carried on pallets
Tárolás / storage	Nyitott vagy zárt térben / not defined, it is possible outdoors and indoors
Szavazatossági idő / Expiration date	Korlátlan / unlimited
Garancia / Warranty period	30 év / 30 years

Műszaki tervezés függ az időjárás viszonyaitól, de nem lehet kisebb, mint 22°, a tetőfelső jobbról balra kezdőkörből a szelmenyalra. Ha 22°-nál kevesebb a tető lejtője és a tetőt használhatanak, kötelező tete alatti fölláthat ránk. Szükséges esetén lehetőség van rögzíteni a cserépeket szegescélesssel vagy fémzúzalék.

Depending on climate conditions, the roof pitch is designed not to be smaller than 22°. The roof is laid from right to left, starting from eaves towards ridge. In the case of a low-slope roof level less than 22° and the use of attic space, the use of roong foils is required. If there is a need for it, tiles can be xed to the planks by riveting them or with bonding wire.

Megjegyzés: "Toza Markovic" Kit az M-333 VELIKA KIKINDA típusú tetőcserep mellett a következő kiegészítőelemeket kínálja:

Footnote: "Toza Markovic" in its range of products oers the following basic tiles M-333 VELIKA KIKINDA and special pieces:

Tetőcserep / Basic roof tile	M-333
Balos szegőcserep / Left finishing roof tile	ZL-333
Jobbos szegőcserep / Right finishing roof tile	ZD-333

Glede na klimatski pogoj se projektira naklon streha, ki ne sme biti manjši od 22°. Streha se pokriva od desne proti levu, zacetni od kapu proti slemenu strehe. V primeru naklona strene površine manjšega od 22 stopinj in koriscenja podstrešnega prostora je uporaba strene folije obvezna. Po potrebi je možno pritrjevanje strešnešnikov na letve z žibljem, vijakom ali žico.

Depending on climate conditions, the roof pitch is designed not to be smaller than 22°. The roof is laid from right to left, starting from eaves towards ridge. In the case of a low-slope roof level less than 22° and the use of attic space, the use of roong foils is required. If there is a need for it, tiles can be xed to the planks by riveting them or with bonding wire.

Opomba: Poleg osnovne ploščadi "Toza Markovic" doo v svojem proizvodnem programu ponuja tudi naslednje posebne dele M-333 VELIKA KIKINDA  
Footnote: "Toza Markovic" in its range of products oers the following basic tiles M-333 VELIKA KIKINDA and special pieces:

Zarezni opecni strešnik / Basic roof tile	M-333

Karakteristični detalji kod postavljanja crepa M-333 VELIKA KIKINDA sa pripadajućim specijalnim komadima  
Characteristic details reffering the placing of roof-tile M-333 VELIKA KIKINDA with accompanying special roof-tiles

Detalii caracteristice pentru monterea țiglei M-333 VELIKA KIKINDA și țiglă carei apartine

J zavisnosti od klimatskih uslova, projektuje se nagib krova, ali ne manj od 22°. Krov se pokriva sa desna desno, počevši od strehe prema slemenu krova. U slučaju potrebe, moguće je uvršćivanje crepa za letve zakljanjem.

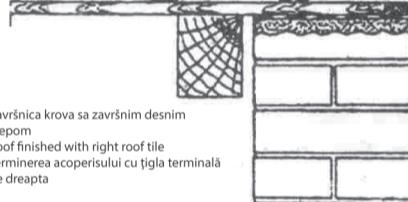

According to climate conditions the angle of roof inclination is designed, but not less than 22°. The roof is laid from the right to the left, starting from the eaves towards the ridge. If necessary, roof tile is riveted onto the lath.

În funcție de condițiile climatice, se proiectază inclinarea acoperisului, nu mai mică de 22° se copără de la dreapta la stânga, începând de la streașină spre coana acoperisului. Dacă este necesar, este posibilă fixarea țiglei de spicu cu cuie.
