

BIO PLANTELLA ADHESIVE TAPE

Excellent mechanical protection of fruit trees, bushes and ornamental trees against a wide range of pests.

UNIQUE ADVANTAGES:

- Double-sided adhesive layer enables fast and simple positioning.
- Adequate width ensures a reliable barrier for all pests.

ADVANTAGES:

- Against the caterpillars of winter moth, willow beauty, moth and other fruit tree pests.
- Strong and quickly active entomologic adhesive enables quick adhesion of all pests (including the light ones), does not wash away and does not dissolve.
- No waiting period.

USAGE:

COMPOSITION:

Tape covered with the transparent adhesive (polyisobutylene), no added active chemical substances for plant protection.

DESCRIPTION:

Adhesive tape is covered with an exceptionally strong and stable entomological adhesive without any chemical active ingredients. With a practical width of 5 cm it represents a natural barrier for winter moth caterpillars, willow beauties, caterpillars of other geometer moths, leaf lice, ants and other pests that climb the tree trunk and cause damage by biting and sucking the plants. The product is harmless to plants.

DIRECTIONS FOR USE:

Place the Adhesive Tape tightly around the tree trunks and branches as well as around supporting poles for trees and bushes. Remove the protective layer. Use the tape throughout the entire year and replace it when it becomes completely covered with pests.
