

EFFECT NEOPERMIN

is an insecticide that guarantees complete insect eradication from inner surfaces.

It is effective against crawling insects in living quarters and storage rooms. Useful for insect control in wall cracks and crevices or under objects.

Effect Neopermin is **contact residual and stomach acting** but it **has also repellent mode of action**. It can be used on wood, concrete and smooth surfaces (glass, ceramic etc.) and should be applied in places which are difficult for children and animals to access (such as under, between and behind cabinets and in cracks and crevices around the edge of a room).

Effect Neopermin is the first dustable powder formulation based on Permethrin to be authorised for use under Biocidal Product Regulation all around Europe.

Against:

- Cockroaches (*Blatella germanica*, *Blatta orientalis*)
- Ants (*Lasius niger*)

Active ingredient: Permethrin 0.5 %

Formulation: Dustable Powder

Advantages:

- Immediate effect.
- Without cleaning of the surface the product can stay active for 3 weeks.

UNIQUE ADVANTAGES OF EFFECT NEOPERMIN:

- Highly effective also on vertical surfaces as it is very adhesive and adheres well to the surface.
- Due to the contact action, it is effective even if insects only crawl over it.

Directions for use:

Correctly applied (under doors, windows) it can work as a barrier that prevents pests to come indoors. Effective even in little doses.

- **1 g / 1 m²**

Packaging & transport packaging:

Effect[®]
